DETAILED ACTION

Acknowledgements

- 1. This office action is in response to the reply filed on 6/9/2006.
- 2. In the reply, the applicant amended independent claims 1, 20 and 26. Claims 12, 13, and 19 remain withdrawn. Thus, claims 1-11, 14-18, 20-26 are pending.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 4. Claims 1-6, 10, 14, 15-18, 20-28 are rejected under 35 U.S.C. 102(b) as being anticipated by Bonnet (6206853). In reference to claims 1, 20, 26-27, Bonnet discloses a medical device having a syringe assembly having a barrel (1) having a forward end and a rear end and defining a reservoir within which the medicament may be contained (Fig 1); a needle cannula (3) having a forward tip and being coupled to said forward end of said barrel and in fluid communication with said reservoir (Fig 1); a plunger (4) having a first end with a stopper positioned in said reservoir and a second end having a thumb pad (Fig 1) for receiving medicament delivery pressure for causing said plunger to move within said reservoir to cause the medicament to be expelled from said reservoir (Fig 1-3); a hollow shield body (5) receiving said syringe barrel therein, said syringe barrel being selectively movable within said shield body between a first position in which said forward tip of said needle cannula is exposed, and a second position in which said

Art Unit: 3767

forward tip of said needle cannula is contained within said shield body (Figs 1-3); a first retainer (11, 7) fixedly coupled to said hollow shield (Figs 1-3) to prevent axial movement of said first retainer with respect to said hollow shield body, said first retainer releasably securing said syringe barrel in said first position; and an urging member (6) arranged between a portion of said hollow shield body and a portion of said syringe barrel for urging said syringe barrel from said first position toward said second position (Figs 1-3), said thumb pad being configured to interact with said first retainer upon movement of said stopper to a position proximate said syringe barrel forward end to release said syringe barrel from said first retainer and enable said urging member to move said syringe barrel from said first position to said second position upon release of medicament delivery pressure from said thumb pad (Figs 1-3).

5. In reference to claims 2-6, 15-17, 21-24, Bonnet additionally discloses a hollow shield body further comprises a flange clip (11) connected proximate a rear facing end of said hollow shield body, wherein said flange clip comprises said first retainer (Fig 1, 8); the hollow shield body further comprises a rim (Fig 6) and said flange clip comprises a recess (Fig 9) engaging said rim for connecting said flange clip to said hollow shield body (Fig 1); the hollow shield body further comprises a step (Fig 1) having a rear facing surface for receiving an end of said urging member (6); the syringe barrel further comprises a radial flange (2, Fig 1) for receiving another end of said urging member (6, Fig 1); the step divides said hollow shield body into a first cylindrical portion having a first diameter and a second cylindrical portion having a second diameter different than said first diameter (Fig 1), said urging member being arranged in said second cylindrical

Application/Control Number: 10/699,808

Art Unit: 3767

portion (Fig 1); and the flange clip comprises a second retainer (7) spaced axially from said first retainer (Fig 8).

Page 4

- 6. In reference to claims 10, 14, 25, 28, Bonnet additionally discloses wherein first and second retainers (7) comprise flexible arms (Figs 1-3, 6-9); wherein the urging member is a spring (6); wherein the syringe barrel is made of plastic (col 6, Ins 25-28).
- 7. In reference to claim 18, Bonnet additionally discloses the first retainer is moved radially outward to release said syringe barrel (Figs 1-3).

Claim Rejections - 35 USC § 103

- 8. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 9. Claim 7, 8, and 9 are rejected under 35 U.S.C. 103(a) as being unpatentable over Bonnet in view of Brunel (6186980). Bonnet discloses the invention substantially as claimed except for wherein said radial flange is positioned between said first and second retainers when said syringe barrel is in said second position, wherein a front facing surface of the second retainer and a rear facing surface of the radial flange are mutually inclined to allow said flange to pass over said second retainer when said syringe barrel is moved from said first flange to pass over said second retainer when said syringe barrel is moved from said first position toward second position. Brunel teaches that it is known to have said radial flange is positioned between said first and second retainers when said syringe barrel is in said second position, wherein a front

Application/Control Number: 10/699,808

Page 5

Art Unit: 3767

facing surface of the second retainer and a rear facing surface of the radial flange are mutually inclined to allow said flange to pass over said second retainer when said syringe barrel is moved from said first flange to pass over said second retainer when said syringe barrel is moved from said first position toward second position (Figs 12-14, col 8, lns 26-57) for the purpose of securing the syringe barrel in the second position. It would have been obvious to one having ordinary skill in the art at the time the invention was made to modify the radial flange as taught by Bonnet with the radial flange as taught by Brunel for the purpose of securing the syringe barrel in the second position. 10. Claim 11 is rejected under 35 U.S.C. 103(a) as being unpatentable over Bonnet. Bonnet discloses the invention substantially as claimed except for expressly disclosing wherein the first retainer is formed unitarily with said shield body. It would have been obvious to one having ordinary skill in the art at the time the invention was made to modify the first retainer (11) as taught by Bonnet to be unitarily formed with said shield body (5) since it was well known in the art that it has been held that the term unitarily is sufficiently broad to embrace constructions united by such means as fastening and

Response to Arguments

welding. In re Hotte, 177 USPQ 326, 328 (CCPA 1973). In the instant case, the first

retainer is fastened and fixedly secured to the shield body.

11. Applicant's arguments with respect to claims 1-11, 14-18, 20-28 have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

12. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Andrew M. Gilbert whose telephone number is (571) 272-7216. The examiner can normally be reached on 8:30 am to 5:00 pm Monday through Friday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Kevin Sirmons can be reached on (571)272-4965. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
